Objectives: Macroeconomics is the study of the economy as a whole. We will delve into the subjects you are probably most familiar with as being associated with economics. What happens to an economy in the long and short run? What roles do individuals and firms and governments play within the economy? Throughout the semester we will cover long run growth, aggregate demand and supply, unemployment and wages, inflation, monetary and fiscal policy.

We will utilize the foundations in microeconomic theory to build simple models of the economy. We will be making very simple models to help explain certain facets of the economy. Please remember that these are just models and do not tell us exactly what is going on in all cases, but only in specific cases. Through investigating the models this course will provide you with valuable intuition and insight into policy debates and other macro concerns.

Prerequisites: Understanding of algebraic systems and the ability to take derivatives. If you do not meet the prerequisites listed online, it is your responsibility to know when to get out of this class and avoid failing. The drop date is January 28th .

Grading Policy: Homework and quizzes (20%), Midterm 1 (20%), Midterm 2 (20%), Final (30%), Participation and Attendance (10%).

The department recommends that classes have a C+ or B- average. Please note this is an average and not a median, we will discuss grade distribution possibilities in class and the curve will be made clear to you should it be utilized. Further, attendance will be taken through quizzes and in class assignments. I may give you a quiz or in class assignment at any time WITHOUT WARNING. If you miss a day without a valid excuse you will not be able to make up the assignment.
