Course Description

This course reviews selected topics from both international finance and open-economy macroeconomics. From international finance, we will discuss international financial markets and their operations. From open-economy macroeconomics, we will discuss macroeconomic policies and their implications. Obviously, most of our time will be devoted to further our understanding of "exchange rates."

Here are some stylized facts:

1. Real and nominal exchange rates are highly correlated.
2. Changes in both real and nominal exchange rates are persistent.
3. Forward exchange rates are poor and biased predictors of future spot exchange rates.
4. International differences in interest rates are large and persistent.
5. Portfolios are not internationally diversified.
6. The extent of international consumption risk-sharing is less than expected.
7. Savings and investment are highly correlated.
8. The trade balance and the current account are countercyclical.
9. Business cycles are correlated across countries.
